HF CONTACTLESS TESTING

Ensuring that your smart cards, readers and infrastructure interoperate with both your own and other devices remains a critical factor before you go to market.

Product interoperability requires that your products have consistent interface specifications (such as protocols, RF and analogue levels) across your rollout, to be able to properly interact with other products.

HF CONTACTLESS TESTING

PRODUCT CONFORMITY TESTING

Your product's conformity is tested for compliance using the following standards:

- ISO/IEC 14443 and ISO/IEC 10373-6
- ISO/IEC 15693 and ISO/IEC 10373-7

FIME'S SERVICES

- Consulting and training
- Technical and administrative support
- Post-test product follow-up
- Failure analysis

TYPES OF TEST PERFORMED BY FIME

- Analogue testing
- Digital testing
- Functional testing
- Integration testing
- Mechanical testing

INTEROPERABILITY PLATFORM

As contactless technology becomes commonplace within the market, ensuring interoperability between different cards and readers will remain a critical factor in your rollout. FIME's contactless platform can help you assess the interoperability between accepting devices and tokens, as well as cards, tags or e-passports.

ABOUT FIME

FIME is a leading test solutions provider, a genuine business catalyst for the development of EMV testing solutions. Through its worldwide reach, FIME supports all market players with know-how and a complete offering in consulting, tests, tools distribution and outsourced R&D for IC-projects.

With over 100 employees on three continents, FIME provides a solution adapted to the local needs of its customers. FIME offers the stability of a company which is part of a large group, as well as the functional flexibility of autonomous teams strongly implicated alongside their customers.
