

ETEC 2007

ETEC Subsets 1, 3, 5, 13 & Maestro UK

A complete range of test cards for the MasterCard Terminal Integration Process (TIP) and more.

Overview

The ETEC test cards, designed by MasterCard enable you to test that your host and terminal payment applications are compliant with MasterCard requirements.

They provide you with a way to shorten system integration within your acquiring organisation, using an application pre-validated with the test cards.

ETEC cards are grouped into different subsets, each with a specific objective to test different criteria and terminal applications.

ETEC 2007 Subset 1

ETEC Subset 1 is used to test the interoperability of MasterCard branded cards in an international cross-border context (a mandatory MasterCard requirement for TIP).

The Smartspy is automatically provided with ETEC Subset 1. It also includes a software analysis tool.

ETEC 2007 Field Interoperability Subset

The Field Interoperability Subset is designed to reproduce specific interoperability issues found in the field. They allow you to ensure that your terminal will be able to handle such issues correctly.

All interoperability cards from the ETEC Field Interoperability Subset have been approved to be run for all terminals passing through the MasterCard TIP (Terminal Integration) process.

ETEC Subset 3

ETEC Subset 3 is designed for use during the network testing and certification of your dual-message interface between the acquirer host debit/credit application and MasterCard International network systems.

FIME, as a participant in the MasterCard Vendor program, offers added value during your *PayPass™* migration, with a range of test tools, training, support and developments.

ETEC Subset 5

ETEC Subset 5 is designed for use during the network testing and certification of your acquirer dual-message host PIN management application interface(s) with the MasterCard's network.

ETEC Subset 13

MasterCard has designed Subset 13 for Swedish Domestic dual-message acquirer host debit/credit application interface(s) to MasterCard's network systems. Subset 13 is used during the network interface testing and validation phases.

ETEC Subset Maestro UK

The Maestro UK Subset is a specific subset dedicated to UK acquirers, to ensure compliance of terminals with UK Domestic Maestro requirements.
